Collection of Waste Batteries

EnerSys falls within the definition of battery producer as detailed in Directive 2006/66/EC of the European Parliament and of the Council of 6 September 2006 on Batteries and Accumulators and Waste Batteries and Accumulators (the "Battery Directive"). Lead acid batteries are the main product type placed on the market by the company although nickel cadmium and lithium ion batteries are also produced.

In accord with the requirements of the above Directive, EnerSys has put arrangements in place for waste batteries to be collected and sent for treatment and recycling. To arrange for the collection of your waste batteries, please contact the customer service department.

A handwritten signature in black ink, appearing to read 'Barry Kelley'.
